

11/18 - mini sub

200K = KS Ind. #

Maler - CU above X level

CF - chd. waste 100 yr

NRD figures CU + does offset.

Costs above fair ant. stand.

Krass - Cost to offset 100 yr?

Bishop - 1/4 + 1/2 sectors.

SH - introducing CU at same level -

JT - Better to keep gross #'s.

Bishop - Want to look @ gross # vs. est.  
on return.

do not have to determine CU to offset.

So want feel for what industry is.

Km - Want to see figures.

JT - But stat. deals w/ gross #'s.

Krass - Can you leave it that vague in stat.?

AB - Other thing - no prob. w/ pricing #

When looking @ eff. pricing -

need to make assumption a large

portion of pricing could be CU.

Last - Use to triggers -

AB - Could do a 2-part

you'd have pricing # to triggers

analysis + then a CU #...

Gm - When triggers analysis NRD + city  
have to work out.

JT - Cap -

Below - city doesn't deal w/

Above - city has to deal w/

AB - c/c a pricing # & in final

When set cap don't want so high that

of CE = 90% couldn't live w/ it

JT - Don't know #

Los - will look @ some #'s.

Bidsp - need more typical industries.

AB - 2 permits

1) What do ind's use

2) How much DNR/NR in book for

BB - Also need to consider use.

AB - other side of coin = how much  
willing to be liable for - NR/DNR.

One consideration =

Kram - Think about putting CE in statute.

Km - need to see both #'s.

AB - need to look @ both.

Mader - 20 ag / yr in Floor

Domin - treat as using 1 ag / day.

Kram - triggers ph rec new uses.
