Subject: Re: FW:here is a revised version of the muni option draft

Unfortunately, or fortunately depending on your point of view, I can't make it Monday but I'll be there Wednesday.

As this revised, revised and reviled propoasl, it has become so complex I'm not sure I understand all of it. However, I think it provides the municipalities with a solid water supply which will allow htem to respond quickly to any possible needs for the enar future. I am assuming that further in the future, the required water management plans will provide the blueprint for their aquisition of theri needs. I am comfortable with providing the guarantee of necessary water to allow for their possible expansion. I am convinced that this guarantee should not come free ofr any possible cost in the ruture. I think it should be undertood that if they reach their guaranteed limit and need more, it will be available but htey will have to assume the cost of mitigation just like everyone else.

See you Wednesday

Eugene
