

AGENDA
DNR-NRD Meeting
Holdrege NE
August 15, 2003

1. Joint Action Plan – What does it look like? Will it be some sort of a policy statement with goals and objectives and the individual districts rules and regulations as attachments? Will it be a separate document for each district? (Probably the best idea) Do we have to publish the entire plan or just our rules and regulations? I would like to see an outline from DNR on what they perceive. I think we should work on our own outlines. What time frame is anticipated?

How does the Joint Action Plan relate to existing rules and regulations?

2. Municipal uses. Is a municipal replacement well limited to historic consumptive use? Same question for industrial uses.

3. Can we treat acres developed or brought into production in 2003 differently? The statutes are clear on new wells but not so on new uses.

4. How will the states allocation of the water be shared?

5. Policy on allocation and certification.

Should we have specific mutually agreed to guidelines for the certification process?

6. Standardization of practices on meter cost-share, installation costs and installation verification.

7. DNR-NRD settlement agreement. Standard reporting form. Flexibility to shift funds between sub-categories.

Can funds be carried over to the next year? What happens after FY 05? Can we expect additional funds in future years?

8. Mike Thompson. Relationship to NRDs. Training sessions for new database.

Reporting Requirements – July 29 email

9. Agenda for Sept. 4th meeting with NRD directors and modelers.
