Ann Model Runs to look at water "to & from"
How much of the depletion is the fault
of the LRNRD etc...

Mike McDonald -

What's happening with the mound water.

Report describing the model is still needed.
Find out How the water moves in the basin using
the model. Does water movement fit the conceptual
model that the model was used putting together

diagrams, statistics, animation

How fast it moves, how long it takes to
affect the trib. & then then maintain
Look at ways to explain the physical reality
using the model.

Use model in the recent past, dry & wet
years etc.
Heavily illustrations & graphs

Particle tracking - small tweak on existing model
where it goes in & where it goes out & how
much comes in & goes out

Are there distinctly separate sub-systems
within the larger system?

AIM - How do we make it happen?

July 12 - meet to discuss the scope - ask questions?

July 14 - scope document draft

Aug. 4 - 10 AM conference call
