Subject: IMP rules

Mike,
I have a question on certified ground water acres with regards to rule 6-6.7

6-6.7. Only those acres that are actually capable of being supplied with ground water through irrigation works, mechanisms or facilities existing at the time of certification may be approved as certified acres by the Board.

Two separate fields are certified to a well, the two fields are separated by a State highway. At the time of certification the operated / owner did not have an easement to transport water under the highway.
Do you agree that without an easement the field across the highway is not actually capable of being supplied with ground water?

Brad
