RE: City of Wichita Pending New Applications, File Numbers. 48-704-48733

Dear Mr. Schemm

I appreciate the notification to residents regarding the new applications by the City of Wichita. I have many concerns in the matter. I am a resident that lives within a mile of the Water Restoration Project. I moved to my home about 20 years ago. I strongly disagree with the fact that the City wants to inject water and remove it as needed for water credits. After searching the internet I see no other city in the US that does such nonsense. I believe there are other ways for supplying the city with the water as they need other than to drain one of the best water sources in the state. I am concerned about what it will do to my water quality and quantity. I know that my water does not have the quality it did when we moved here 20 years ago. I do plan on having my water tested. The injection of the treated water was against my idea but what to me is even more troubling is withdrawing the water to supply such a large population. I believe there are other ways supply water to a growing community. I do not want to be facing what western Kansas is facing now. When the withdraw of water from the equus beds exceeds its supply we all end up losing. I believe that supplying water for the growing city should be taken from another source.

I believe that as humans we take what we want without planning on what will happen when it is gone. We use things up until it's all gone. That is our nature. And also when did it become okay for the City of Wichita to sell water to other municipalities? I know I am a small resident that disagrees with the plan a big City has and a lot of money involved but to me our future depends on this plan!

Gwen
